

ASSIGN AN ID TO V2 ELEMENTS (SECTION, ROWS, ETC.) IN CORNERSTONE

Simple and Advanced mode for v2 elements were introduced in the recent update for **X 6.1.0** and **Cornerstone 3.1.0**.

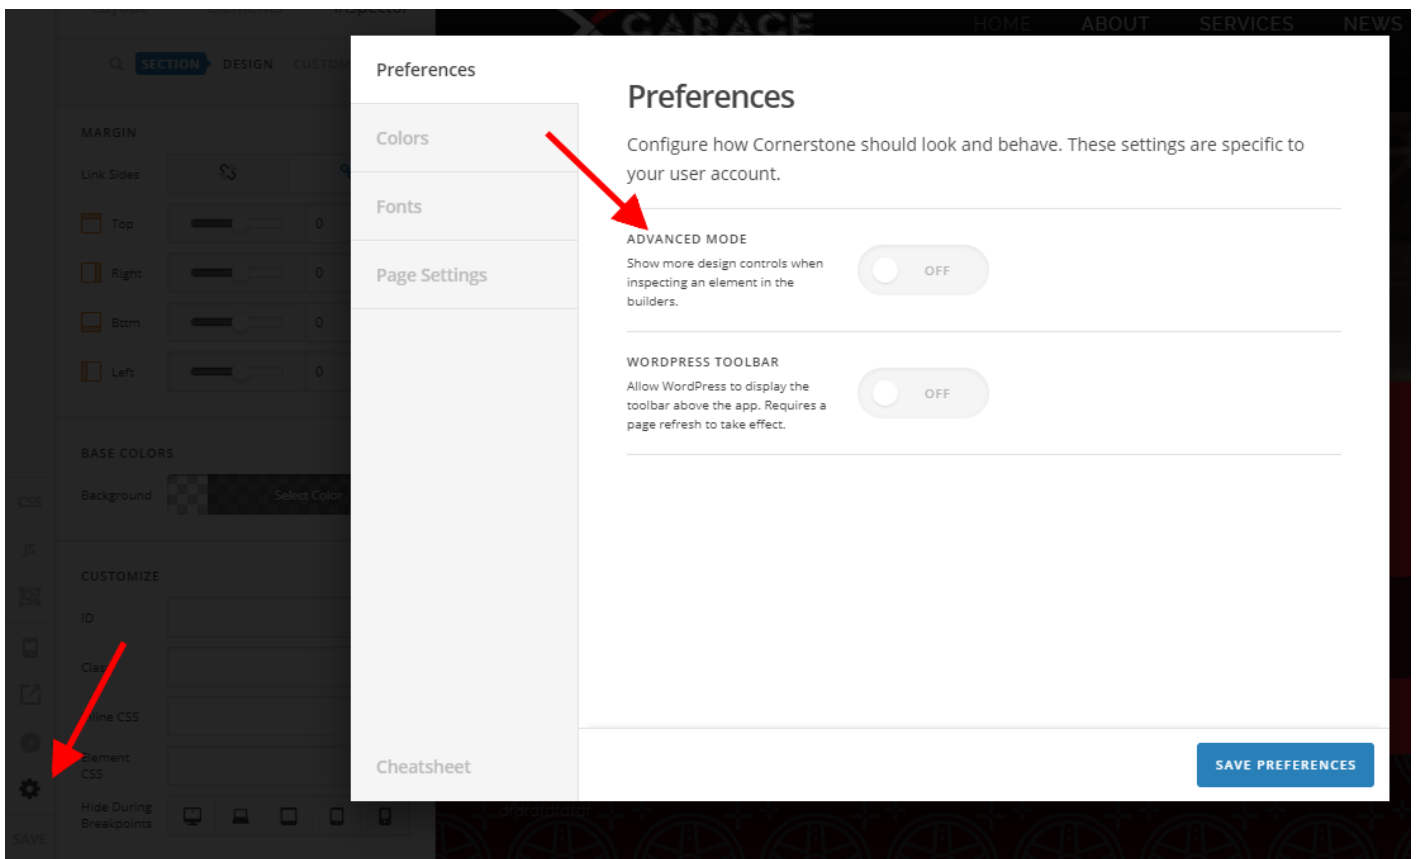

This means that you could toggle the options available for elements to have less or the complete options.

By default, simple mode is active, thus, you will be seeing fewer options like this:

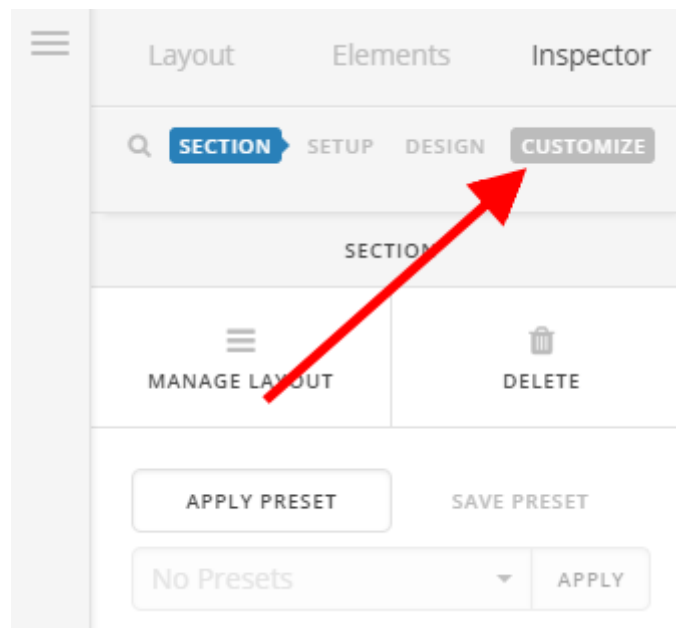

So under the **customize** group, you can set some settings like the ID field for the section.

To have the complete options, you will have to click on the cog icon found on the left pane then enable the **Advanced Mode** under **preferences**.

Once Advanced Mode is enabled, you will have to click on the customize option under the element's setting to be able to set some of the options like the ID, class, etc.
